TABLE of CONTENTS

At one time or another, you undoubtedly have thought "why should I buy Deere Deere Parts? Are other parts just as good? How could I save money?"

It's only natural to think these things...to want to stretch your dollars as far as possible. There are several basic reasons why Deere Deere Parts are superior...

1. Deere Deere Parts are designed from the original working drawings of the original parts.
2. Deere Deere Parts uses the "original specifications or better" by doing this we achieve longer life cycle for our parts.
3. Deere Deere Parts consults with the employees who originally made these parts to find valuable information on cost savings and manufacturing tips.
4. Deere Deere Parts has made a commitment to have our products manufactured in modern U.S. precision facilities that employ U.S. Citizens whenever possible.
5. Deere Deere Parts are all tested for fit and finish on John Deere tractors to ensure ease of installation and customer satisfaction.

Summarizing, Deere Deere Parts are an exact duplicate in fit and in quality. Our parts meet or exceed the original manufacturer specifications of the original parts they replace.

This 2008 Deere Deere Part Catalog is the fourth edition published. It is available to help you check your equipment easily and quickly for necessary parts.

This issue features our newest product upgrade. You will fall in love with the genuine rubber grip. Turn to page 26-27 for details.

Come to Deere Deere Parts for reliable and careful attention to your parts and catalog needs. See us on your next trip to town or visit us on the world wide web at www.DeereDeereParts.com

PARTS CATALOGS

What more can be said than already has been said. . . These are a must have.

The Parts Catalogs and Operators Manuals we sell at Deerey Departed are original John Deere publications made to the high standards to which you are accustomed, however these volumes have been treated very specially. Deerey Departed has put extra effort in cleaning up the original images and providing an early version styled manual. These manuals are printed on heavier sepiatone stock than their newer counterpart and have a better value price point. We as collectors couldn't ask for more. Buy these versions today!

NOTE: B MANUAL IS PICTURED

Service Manuals, once intended for the John Deere dealer are now available for the hobbyist or professional tractor restorer. Our manuals are as close to the originals as you can get. With features like the fold out chart found in the B service manual and color diagrams when appropriate, our manuals stand above the rest. These manuals are printed on heavy sepia toned paper and are drilled to fit a standard 3 ring binder or will fit perfectly in an original style John Deere locking binder.

The wealth of information included in these publications is unmatched in any other publication.

We provide these manuals drilled and packaged in shrink wrap so you can decide how to bind your manual. Whether it is in an inexpensive 3 ring binder to save expense or our reproduction "Service binder" found below, you are sure to find these manuals invaluable.

 Power-Trol and Power Lift

PUBLICATIONS

OPERATING INSTRUCTIONS

Operating Instructions are at times incorrectly referred to as a service manual, and we can understand why. This style of manual was only available for the early unstyled tractors and equipment. The manual begins with simple operating information, followed by a nice section on service and repairs.

The final section of the manual contains parts lists, and parts diagrams. These very condensed manuals contain some very valuable information not found anywhere else. Even though these manuals contain just a few pages, they are a handy reference and an alternative source of information. Printed on sepia toned paper to ease eyestrain, each manual has a heavy card stock cover and is punched to fit a 3 ring binder or the original John Deere post binder.

Tractor		DD Part #	Price

IT SHOP MANUALS

These Shop Manuals have been around for many years providing a low cost technical reference for restorations. They provide an abbreviated look at what might be necessary to help in a troubling situation. The reference charts provide clearance information on bearings and journals. These make a quick source of information when you may not need the big guns.

New Generation Brake Parts:

With the growing interest in the new generation line of tractors, Deere Deported has begun adding this line of parts to our selection. See the new generation brake parts above and check out our new products throughout this catalog. Or check online at www.DeerelyDeported.com where you will find parts listed by Category or by tractor model.

BRAKE SHOE RETURN SPRINGS

Get snappy return of brake pedal and save unnecessary wear on brake linings. Buy the exact spring with proper tension from us.

Tractor	Spring	Price
A, G, R, 60, 70, 80, 520, 530, 620, 630, 720, 730, 820, 830	R21753	\$2.00

Deerely Deported Part Number 1083

ORIGINAL PULLEY BRAKE LINING \$8.00

Here is our original pulley brake lining.

This reproduction lining is designed to fit all the letter series tractors and others. Install by clamping to the brake arm and drill from the arm hole pattern. Brass rivets are included. This lining will surely give your restoration a more authentic look. Replaces D1932R.

Deerely Deported Part number 1087

Our rivet on pulley brake linings have recently changed. We have lowered the price considerably and upgraded the pad material to provide an improved fit and more durable product. In addition the brake pad will fit all brake arms. Installation is as simple as clamping the pad to the brake arm, drilling the pad from the guide hole side of the brake arm, and riveting in place. After a quick trim with a file or grinder, the pad will look like it came from the factory. Our pad material is rated to withstand a very high temperature and have high wear tolerance. The pad thickness allows accurate brake arm alignment with the pulley drum and prevents drum contact when not in use.

PULLEY BRAKE LINING WITH ADAPTER \$9.50

Saves time...no riveting

Here's a time saver. The pulley brake lining with adapter is attached in a jiffy without riveting. Simply replace the old lining by bending over the clamps at the sides and ends of the adapter and you're ready to go.

Tractor	Lining	DD part#

Bonded Lining for A, 60, 620-730	AA6129R	1053	\$34.50

OVERSIZE CLUTCH LINKAGE PIN

Our clutch linkage pin replaces the old worn out pin found in many tractors which causes excessive clutch lever movement before clutch action and engagement.

Sometimes you might wish you could grow longer arms to be able to fully engage the clutch linkage, and excessive wear could mean the clutch lever rocks fore and aft without operator intervention. This oversized pin is the answer. Many tractors just need to have this pin installed; others may need the linkage drilled to accept the pin. Comes in standard drill size of 9/16" or 1/2". Each kit contains 2 clutch pins along with 2 cotter pins.

Tractor	DD Part# / Price

UNSTYLED RADIATOR CAPS

A higher order of quality

Our line of unstyled radiator caps and repair parts are unmatched in quality and life. With features like brass baffle plates and screw studs, combined with our stainless steel bar-nut, this combination will outlast the original by at least an order of magnitude.

RADIATOR FILLER NECKS

Replacement filler necks at a very reasonable price.

We carry a full line of Radiator Filler Necks that are easy to replace because they fit correctly. There are many things to consider when building these necks. Ours not only fit the tractor in height and bore, they fit the original caps perfectly. Our customers say there is no glue or sweating required. The fit and performance exceeds the original necks, due to the higher quality metals and gauge we use.

COOLING SYSTEM

Two wire hose clamps

Perfect for the tractor or automotive restorers seeking original details for their projects. Our wire hose clamps have the original pan head screw. Made from steel, these wire clamps are the real item designed to hold radiator hoses for pressurized cooling systems. See our chart below for available sizes.

Measure Twice, Order Once

We are all spoiled by today's modern stainless steel, worm drive hose clamps with their infinite adjustment. We expect our antique style clamps to perform to the same standard. Unfortunately that's just not going to happen. The antique style wire hose clamp operates like a set of dividers - the actual amount of adjustment available in the clamp is about half of the amount of screw adjustment available at the top of the clamp. Therefore it is important to choose the smallest clamp available that snugly fits your hose before tightening. The clamp looks better and performs better if the screw adjustment isn't completely closed.

Follow these guidelines:

Hose is advertised, measured, and sold by the inside diameter. A 3" hose has an inside diameter of 3". When choosing a clamp for the hose, you must remember that the clamp must fit the **OUTSIDE** diameter. The thickness of the hose wall varies depending upon the type of hose - regular or heavy duty. It is best to measure the hose outside diameter **AFTER** it has been installed. This way you have allowed for any size variance due to distortion. It is best to measure with a set of calipers to get the most accurate measurement. Once measured with the calipers, measure the diameter again from a different angle. Remember, the best looking and most functional clamp is one that is snug before the clamp is ever tightened.

HOSE CLAMPS

\$3.50 each

Two Wire Hose Clamps for every use

We have a complete line of adjustable hose clamps that will fit hoses from 1-1/2" to 4" O.D. Our wire hose clamps are extra strong to grip and provide a strong seal on water or air hoses. Pick up an assortment with your next order.

GNARLY DUDE!

At least that's how things can feel when working on the electrical starting and charging systems at times. Combine the positive ground electrical systems, along with terms like polarizing the generator and you might feel a little Gnarly...Dude. The simple answer is our Electrical Systems Service Manual. This manual describes test setups, diagnostic results, when to polarize the generator and how to perform the procedure.

Available on page 3 of this product catalog it is Deerely Departed part number 2086. The cost is \$28.00

Battery MINDers

Get the extra, full-charge battery life and performance from your battery! Our battery MINDer conditions "sulphated" batteries as well as automatically charges any type 12/6 volt storage battery without ever over-charging. Dubbed the charger with a "brain", it is believed to be the first charger of its kind to reverse the primary cause of early battery failure known as "sulphation." Batteries that were once considered beyond recovery can now be brought back to long-term useful condition!

EXHAUST

MANIFOLDS

\$55 & \$70
New
Ceramic
Coating

NEW! Ceramic Coating is now available on all new manifolds and mufflers from Deere/Departed. The ceramic coating starts with a complete cleaning with a special sand to etch the new metal to give it a special "tooth" to hold the ceramic coating. The metal is baked after blasting to "sweat out" any residual, followed by a thorough solvent cleaner. Next, we coat your muffler inside and outside with a special high temperature ceramic paint. After a drying period, the muffler is baked at high temperature for many hours to fuse the ceramic coating. This high temperature product will withstand over 2000°. You may never need to touch up your manifolds and mufflers again. Finish resembles John Deere Blitz Black.

We don't have unsightly part numbers or characters cast into our product - after all, your tractor wasn't made in China! New sand casting molds make this heavy duty exhaust manifold a SUPERIOR product on the market! Coated in a soft black to prevent rust, the cast iron will age naturally once it is heated.

ECONOMY MUFFLERS

These economy mufflers are made of aluminized steel for long life at low cost. The special baffle design provides positive muffling and helps regulate back pressure to allow valves greater freedom and permit engine to deliver full horsepower. Don't buy a "straight-through" muffler. See us for mufflers designed for John Deere tractors.

Oval Mufflers

Super silent ... Maximum visibility

The oval muffler was designed to handle the increased volume and hotter exhaust gases caused by increased tractor horsepower. The greater area of the oval muffler means a 30% reduction of muffler noise. The aluminized steel center tube and baffle plate, faster dissipation of heat, and special heat resistant paints contribute to extend muffler life. Oval mufflers are available for older tractors. Check the chart below:

FUEL SYSTEM

CARBURETOR FLOATS

PREVENT THE OVER FULL FEELING

Carburetor floats are easily overlooked as the cause of flooded starts and fuel in the crankcase oil. These floats can easily be overlooked as the cause, if the float doesn't... it won't shut off the fuel hence a flooded engine or crankcase.

Test or replace your float at every carburetor rebuild.
